Finding Lshort

The TEX Live distribution installed by MacTEX contains a well known introduction to LATEX called "The (Not So) Short Introduction to LATEX 2$_\varepsilon$" (lshort) available in many translations (see the list of languages in Table (1) below).

To find those translations you should click on Go → Go to Folder... (Shft-Cmd-G) in Finder and enter

```
/usr/local/texlive/XXXX/texmf-dist/doc/latex/lshort-LANGUAGE
```

where XXXX is the year of your TEX Live (MacTEX) distribution (e.g., 2016) and LANGUAGE is the language you wish to look at from Table (1) below. E.g., for TEX Live 2016 and the English version use

```
/usr/local/texlive/2016/texmf-dist/doc/latex/lshort-english
```

and then press return. That will open up a folder containing the pdf file with the chosen translation.

bulgarian	chinese	czech	dutch
english	estonian	finnish	french
german	italian	japanese	korean
mongol	persian	polish	portuguese
russian	slovak	slovenian	spanish
thai	turkish	uke	vietnamese
